

In women with HR+, HER2- metastatic breast cancer*

When is it time to consider Verzenio?

PrVerzenio® (abemaciclib) is indicated for the treatment of hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative advanced or metastatic breast cancer¹

- in combination with an aromatase inhibitor in postmenopausal women as initial endocrine-based therapy.
- in combination with fulvestrant in women with disease progression following endocrine therapy. Pre- or perimenopausal women must also be treated with a gonadotropin-releasing hormone (GnRH) agonist.
- as a single agent in women with disease progression following endocrine therapy and at least 2 prior chemotherapy regimens. At least one chemotherapy regimen should have been administered in the metastatic setting, and at least one should have contained a taxane.

Verzenio® is dosed twice daily on a continuous schedule until disease progression or unacceptable toxicity occurs.¹

Consult the Product Monograph at <http://pi.lilly.com/ca/verzenio-ca-pm.pdf> for important information on:

- Contraindications regarding hypersensitivity to Verzenio® or to any of the ingredients.
- Most serious warnings and precautions including venous thromboembolism.
- Other relevant warnings and precautions regarding diarrhea, neutropenia, interstitial lung disease/pneumonitis, hepatotoxicity, infections, monitoring of complete blood counts, caution when driving or operating machinery, fertility impairment in males, usage during pregnancy, and usage in nursing women.
- Conditions of clinical use, adverse reactions, drug interactions, and dosing instructions.

The Product Monograph is also available by calling us at 1-800-545-5972.

* HR+ hormone receptor-positive; HER2- human epidermal growth receptor 2-negative; mBC metastatic breast cancer
